[Subtitle or date]

AGENDA

What we will cover.

01 The problem we keep seeing

02 How TACEDGE structures the workflow

03 What a pilot looks like

04 Evidence from live work

05 Next steps and decision point

01

[Section title]

[SECTION]

One clear message per slide.

Lead with the outcome. Support it with two or three short sentences at most. If the slide needs a paragraph, it needs a document instead.

[SECTION]

Two-column content.

Before TACEDGE

- Field records arrive fragmented
- Hours of data entry and chasing
- Reports rebuilt from fragments

With TACEDGE

- Captured once at the workface
- Live picture for the PM
- Confirmed report released to the engineer

Three supporting points.

Field usability

Simple crew controls, offline-first capture, large touch targets.

Evidence integrity

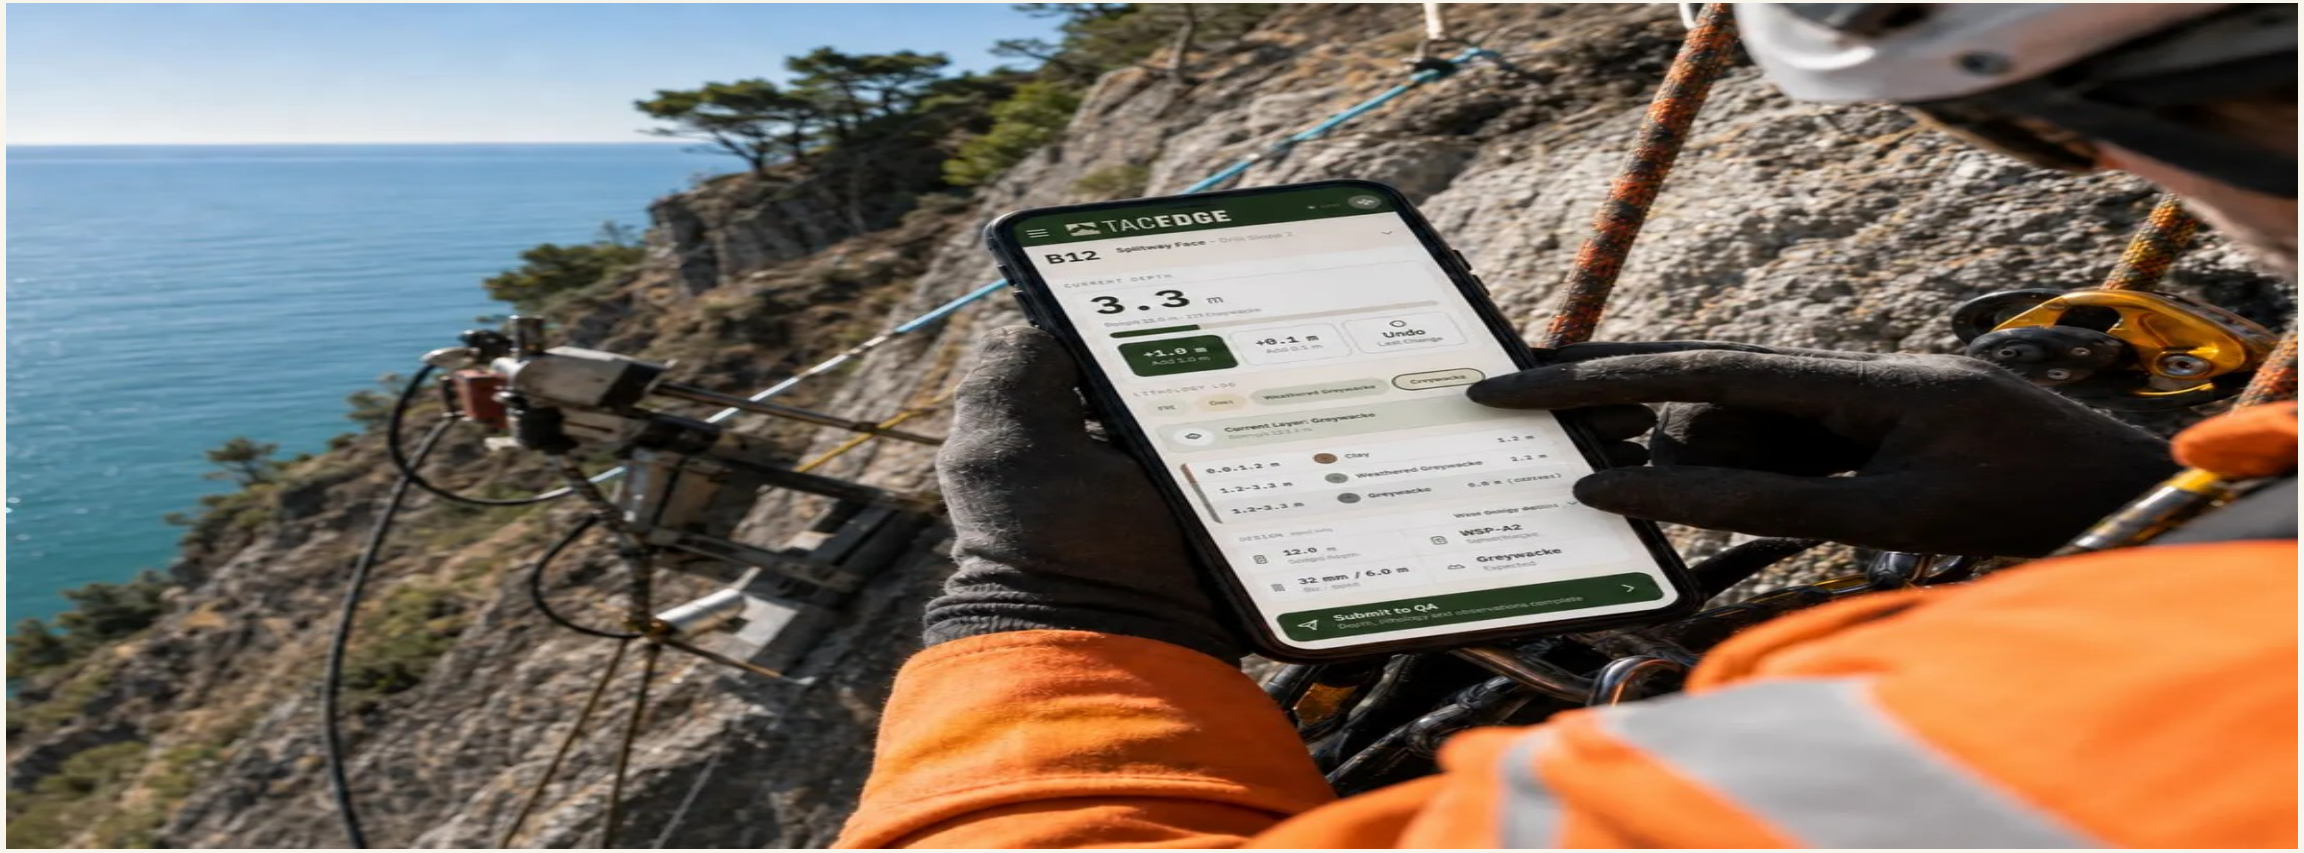

Photos, tests and measurements attach to the work item as it happens.

QA visibility

Exceptions surface for judgement. Everything else flows through.

Full-width image.

Caption: place, activity, year. [Replace with your image]

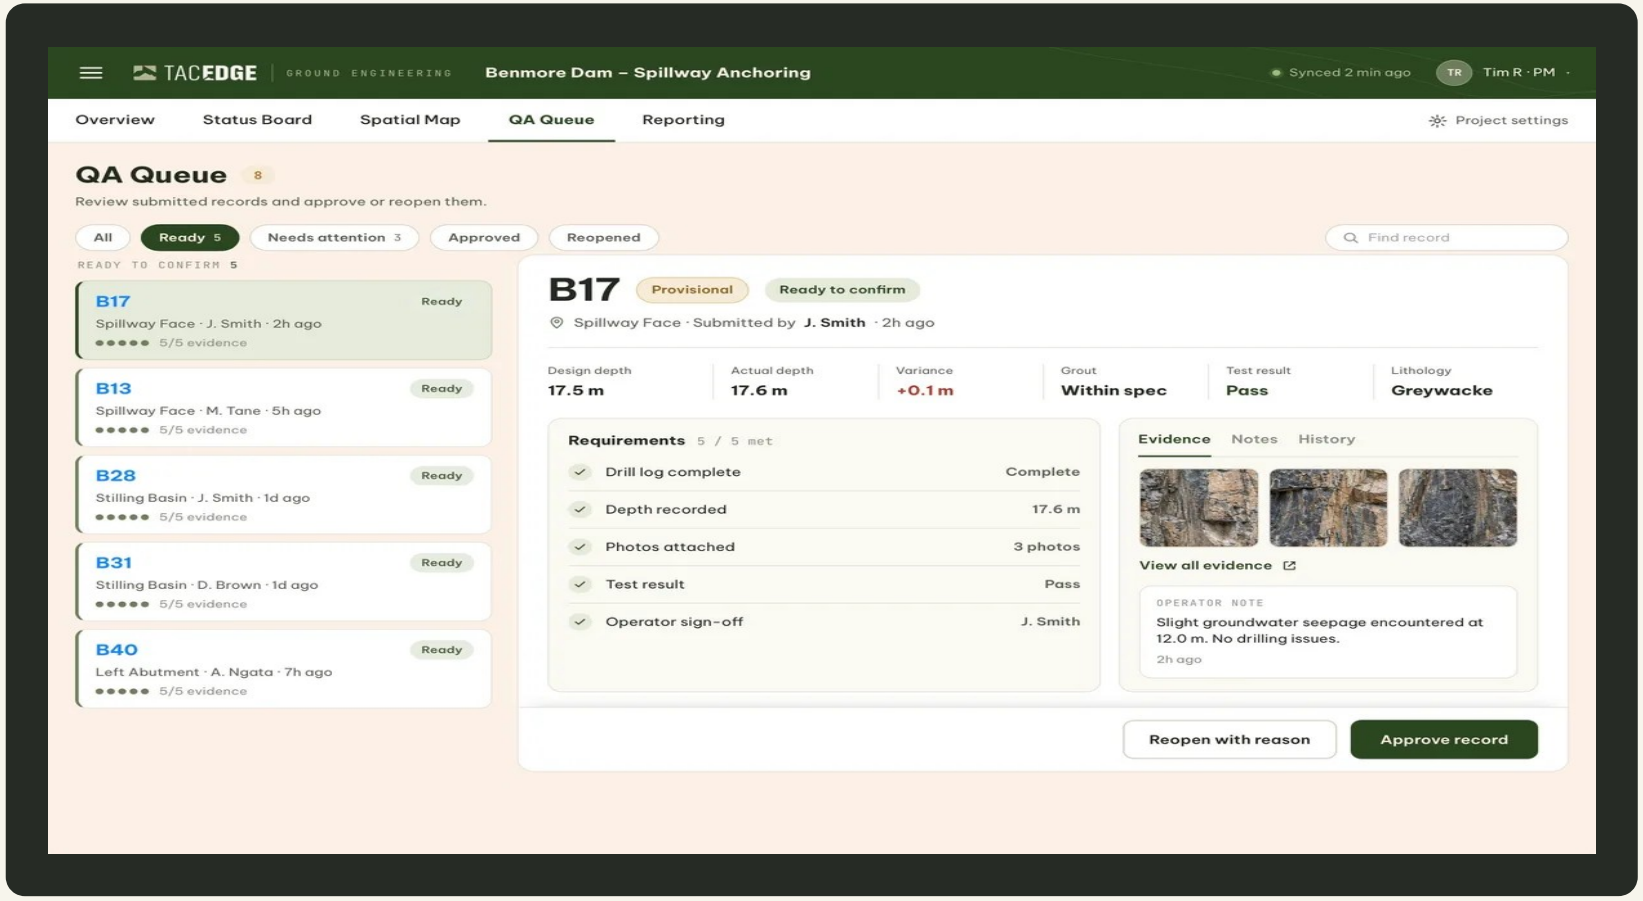

Image and text.

Say one thing about the image.

- Set the project up once
- Capture the work where it happens
- Give the engineer a confirmed report

Real screens only.

TACEDGE QA queue · [replace with the screen relevant to your story]

Field data becomes project overhead.

THE CURRENT WAY

- Paper, forms, apps, calls and photos
- PMs compile instead of assuring
- Engineers receive reconstructed reports

WITH TACEDGE

- One shared system from setup to release
- Live, structured field data
- A confirmed report the engineer can trust

Configure. Capture. Confirm.

1 Configure

Set the project up once.

→

2 Capture

Record the work where it happens.

→

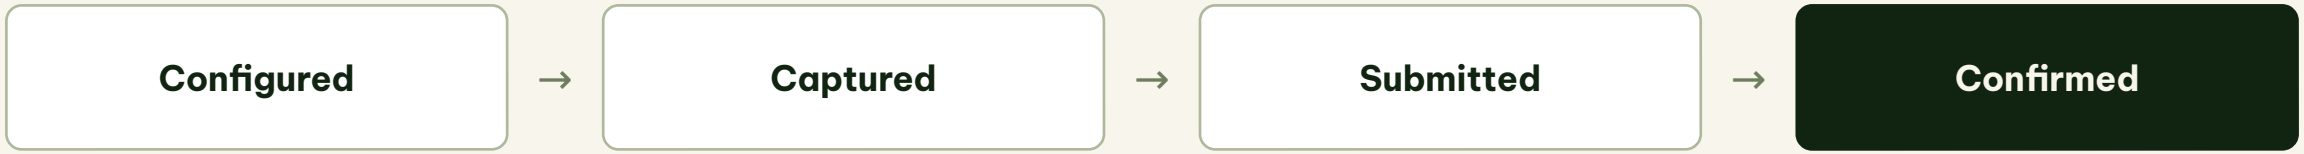

3 Confirm

Verify and release.

Release is the outcome of Confirm. It is never a fourth stage.

[SECTION]

Process flow.

One arrow style. Single-word stage labels. Forest fill marks the terminal-positive stage only.

[SECTION]

Key numbers.

[12]

records confirmed per shift

[0]

re-keying steps

[15 min]

from capture to PM visibility

Numbers must be evidenced. Source note: [source, date]

[SECTION]

Comparison.

	Current way	With TACEDGE
Capture	Paper and re-keying	Once, at the workface
Visibility	End of week	Live
Report	Rebuilt by the PM	Released from confirmed records

> **“[Short, verifiable quote from a named role. Two sentences at most.]”**

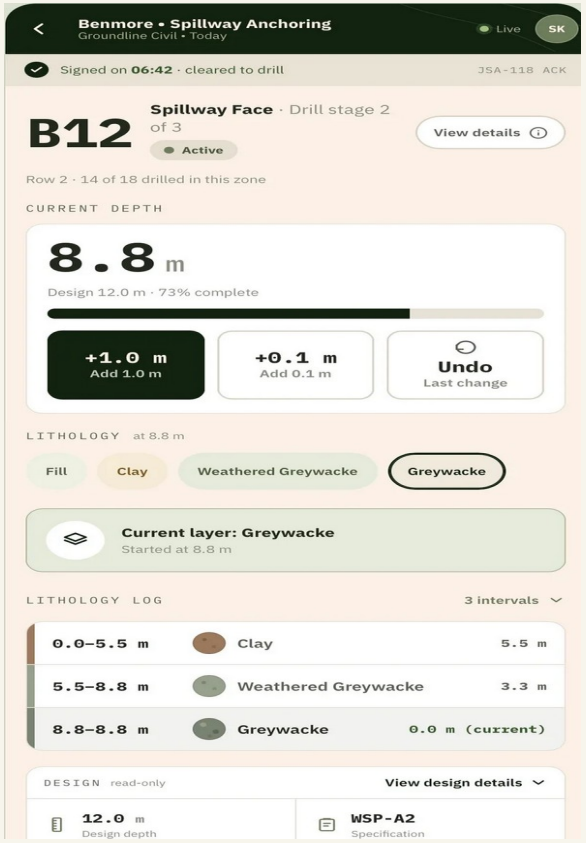

[Name or role] · [Organisation] · [Date]

[SECTION]

Timeline.

[Project name]: what the evidence showed.

CONTEXT

[Work type, location, crew size.]

WHAT WE DID

[Configured the workflow, captured live work, confirmed the record.]

RESULT

[Evidenced outcome with numbers where possible.]

NEXT STEPS

A small validation, not a broad rollout.

1. Choose one workflow
2. Configure it together
3. Validate it on live work
4. Decide from evidence

TACEDGE

See TACEDGE on your project.

Bring a current project or reporting problem. In 15 minutes, we'll show how TACEDGE would structure the workflow.
